DETAILED ACTION

Allowable Subject Matter

Claims 1-20 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record does not teach thinning the sidewall passivation layer with an etching gas mixture comprising a non-halogenated hydrogen containing gas and a fluorine containing gas.

Mui (6,235,643) and Douglas (4,855,017) each teach a process of in which the profile of a trench is controlled by using an etchant that produces a sidewall deposit and controlling the amount of sidewall deposit by adjusting the etchant composition. These references also teach the use of a non-halogenated hydrogen contain gas. However, both Mui and Douglas teach using a non-halogenated hydrogen contain gas as a means of building up a sidewall deposit rather than as a means of thinning a sidewall deposit as is presently being claimed. Williams (6,583,065) also teaches using a non-halogenated hydrogen contain gas. However, Williams teaches that the non-halogenated hydrogen contain gas is to be used in the absence of a fluorine containing and, like Mui and Douglas, the non-halogenated hydrogen contain gas in used by Williams to produce a sidewall deposit rather than eliminate the sidewall deposit.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record on the attached PTO-form -892, while not relied upon, is considered pertinent to applicant's disclosure.
